

DID YOU KNOW?

That the Colorado River used to have a 2 million acre delta region at its mouth with marshes, twisting river channels and jungle like riverside forest vegetation? This no longer exists as it now feeds Las Vegas, Los Angeles, San Diego, the Imperial Valley, Phoenix, Tucson and what little is left feeds the Mexican cities of Mexicali and Tijuana. And did you know that our government has signed contracts with 7 states and Mexico to deliver more water annually to these entities

than actually flows down the Colorado in a given year?
